

Makin' Waves

Two parts hydrogen, one part oxygen, with the covalent bond being artists concerned about the planet – and its reliance on water. “H₂O” is GreenHill’s newest exhibit where you can check out Bryant Holsenbeck’s mammoth waterfall, made up of disposable water bottles, or his meandering stream of plastic culled from the ocean, then catch his comments on Wednesday April 13, at 5:30 p.m. Later in the month, at 5:30 p.m. on Wednesday, April 27, Will Warasila will discuss his photographs of people living in the shadow of Duke Energy’s Belews Creek Steam Station, where 12 million tons of coal ash are being cleaned up. And every Tuesday from 1–2 p.m. at LeBauer Park, GreenHill artists/instructors will host water-inspired art activities for children and their families. Water you waiting for? Info: GreenHillNC.org/H2O.
